Loss of energy happens because of the irregular and rough interior surfaces of the fittings. This lead to the production of large-scale turbulence resulting in the creation of eddies. The loss of energy because of various pipe fittings is expressed as: whereis the fitting loss coefficient (Singh 2009, p19). References Biswas, G., &Som, S. K. Fluid Mechanics for Chemical Engineers, 3rd Edition

Fluid Mechanics is the study of fluids at rest (fluid statics) and in motion (fluid dynamics). A fluid is defined as a substance that continually deforms (flows) under an applied shear stress regardless of the magnitude of the applied stress. Whereas a solid can resist an applied force by static deformation.
