hi guys. Im confused. the more I read the less Im certain about how to take a 1985 5.0 5 speed dura spark set up and install it into a 1987 GT cv that I am retrofitting to carbed. Can anyone tell me which wires in the TFI set up I connect to the distributor, the duraspark module and do I leave the box coil alone? Also, what wires do I splice, or re-wire to get the electric fuel pump to run?
