for my fluids project we built a viscometer, but that is probably the most boring thing in fluid mechanics. I never learned about it in class, but that video showing the differences in fall trajectories of a non-rotating vs a rotating basketball was pretty awesome. I'd link but I'm on mobile and my laziness knows no bounds.

REU Participant's Role: The student's role in this project would be to design a cooling plate which helps remove heat from the substrate material. To do this, the student must model the heat transfer and fluid flow in the system using ABAQUS, or other computational software, and validate any findings with experiments.
